## HUSemOrg: Quick Start Guide

(Sacklowski, 18.07.07; Hildebrandt 14.08.07)

This guide refers to the installation on the Windows operation system. The application should also run under Linux/Unix or Mac operating systems, but in this case you have to download the appropriate SWT version.

There two steps to follow for the appropriate installation.

Step 1: Install MySQL and some tools

Step 2: Install the husemorg

### 1. Install MySQL

#### 1.1 MySQL-Server

It will do to download the MySQL-Essential-Version, which can be found at:

<http://dev.mysql.com/downloads/mysql/5.0.html#win32>

#### 1.2 Create the user semorg

The application HUSemOrg relies on

- a **user semorg** with the **password semorg**
- a catalog (database, schema) **husemorg**, for which the user owns full access authorization
- the user needs also full access authorization for the catalog mysql

A graphical administration tool is very comfortable to accomplish the for the tasks mentioned above, e.g. the MySQL-Administrator, which can be found at:

<http://dev.mysql.com/downloads/gui-tools/5.0.html>

### 2. Install HuSemOrg

- HUSemOrg is Java application, so it's necessary to install the Java Runtime Environment (Version 5 and higher).
- HuSemOrg comes with all the needed libraries, so you just have to unpack the zip archive `husemorg.zip`.
- You can start the application by executing the `HUSemOrg.bat` or the `HUSemOrgNoConsole.bat`.
