1. General remarks and general impression concerning the state of the review object

First 6 slides mostly repeat things from some other topics, but in a nice and short manner. Good.
Slides 7 – 17 are ok, my questions about these are given in “additional suggestions”.
Same stands for slides 18 – 23 that nicely explain “implementation design”.
Last few slides are just definitions, so I have no comments.

2. Contents errors and misspellings in the slides

Slide 22: In the middle box, first 3 notions are in english, the last two in german.

5. Additional suggestions for improvements and and extentions

It's a rather short topic. Still, at slide 7, where we show 6 different influence factors, we decide to explain in details only 3 of them in the rest of the topic. What is the explanation for the students – WHY those 3? What about the rest?

In Slide 15, concerning the reusability and specially “modification” we say that “we must DELETE some of our attributes and operations”. Delete? That changes the concepts, changes the design, changes the suggestions from the analyst ... What is the explanation for the students – WHAT happens with those attributes?

6. Lecture notes for particular slides:

Slide 5: Spelling (?) error – “we shall use the same notation(s) THE we used...”. Isn't it THAT we used?

Slide 18: Spelling error – “... we now move to THE A bit ...”. It's THE or A.
