

# Face Capturing

High-Quality Single-Shot Capture  
of Facial Geometry

Inna Usik und Svantje Lilienthal  
SE Visual Computing

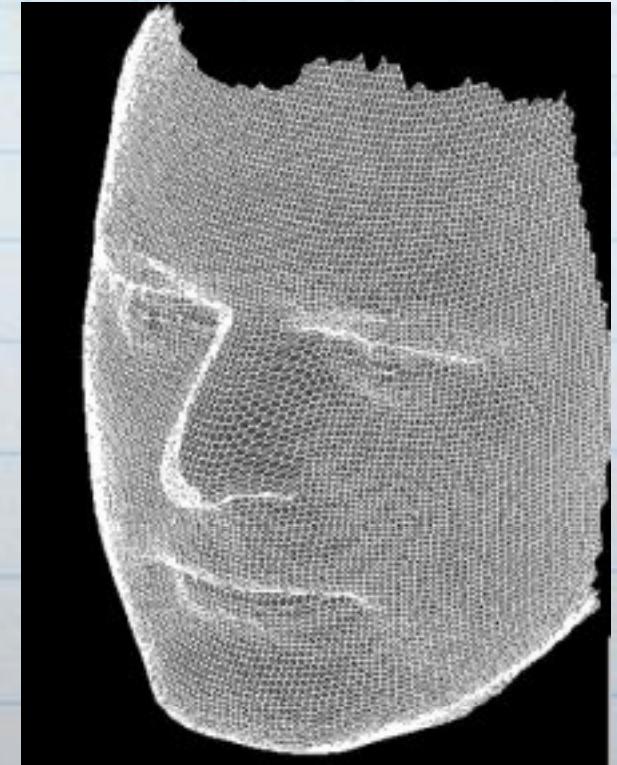

# Content

1. Motivation

3. Results
4. Conclusion

# Motivation

Why 3D faces?

- reproducing realistic human faces
- of interest in multiple domains  
(movies, games, medicine, etc)
- application: combination of  
speech and facial expression

<http://www.heise.de/newstickermeldung/3D-Gesichtserkennung-von-NEC-95901.html>

# Motivation

current methods

## active systems

- + robust
- + high quality
- special hardware
- time-multiplexing

## idea

combine advantages of passive stereo system  
with high quality of active systems

## passive systems

- + one shot
- + different arrangements
- + various # of cameras
- + multiple distances and scenes
- + common hardware
- no high quality

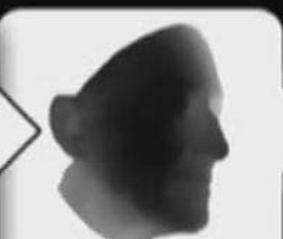

# Method

## Overview

Calibration

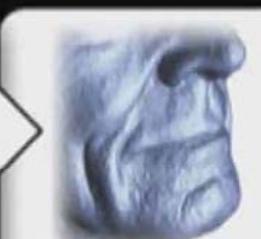

Pairwise Stereo

Meshing

Optimization

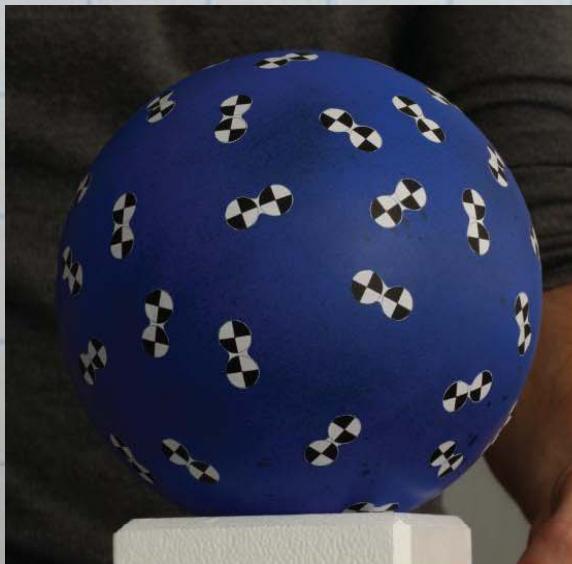

Mesoscopic

# Overview

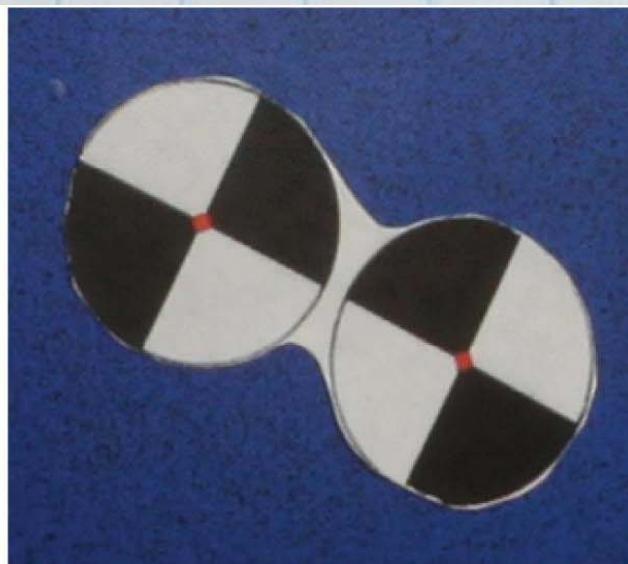

# Calibration

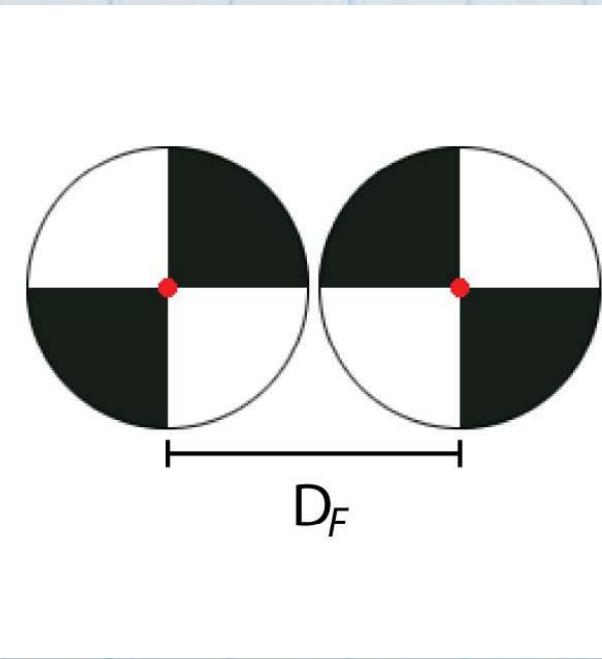

- pre-processing for face scanning
- aim: orientation of the cameras
- sphere: nearly head sized
- fiducials help setting up a 3D capture zone

Calibration Sphere

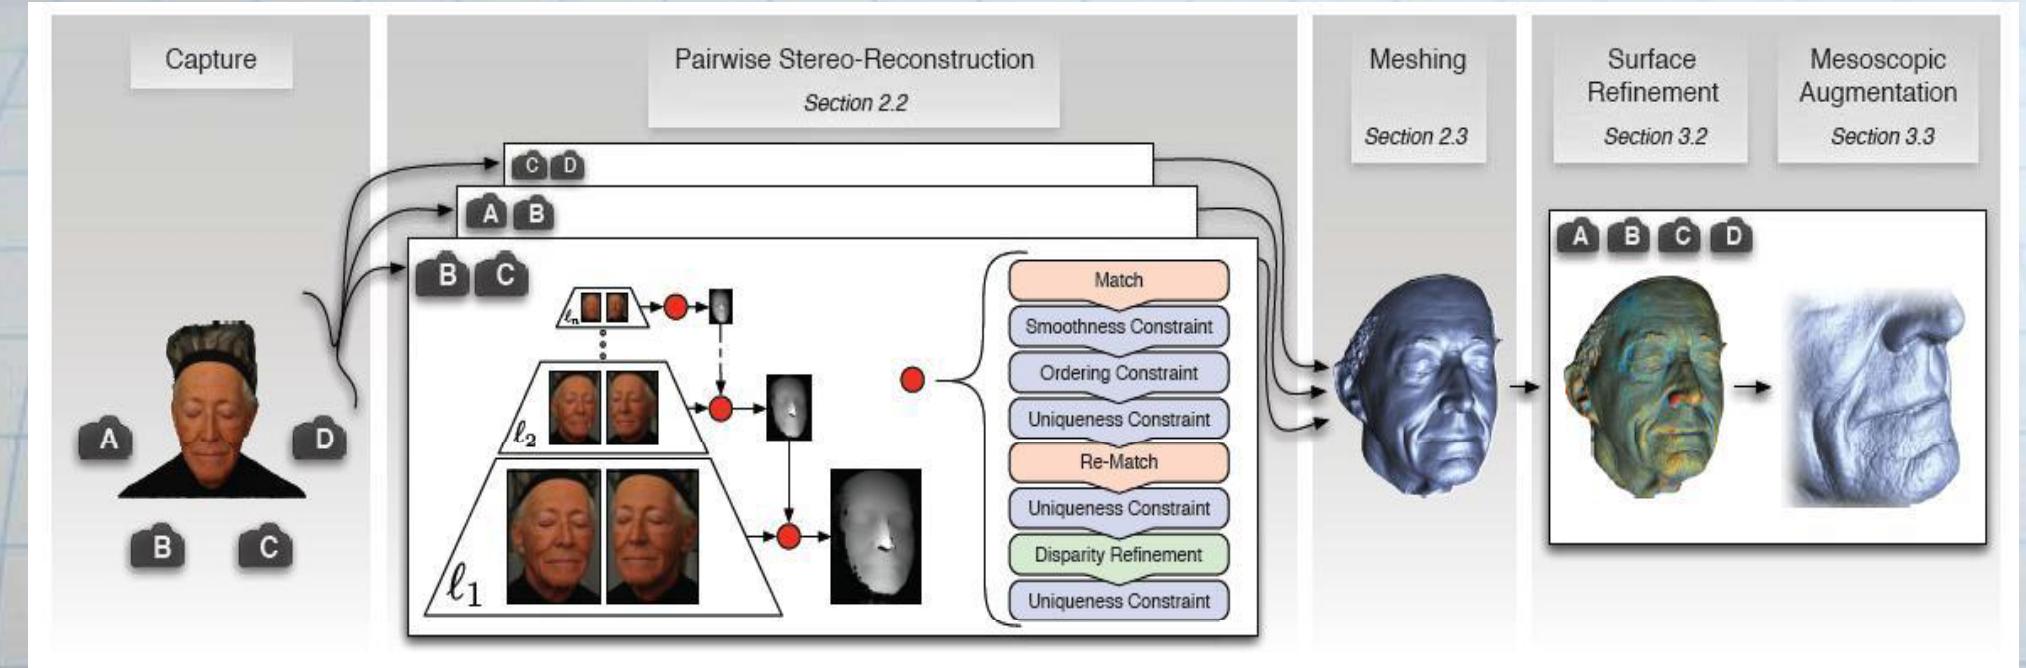

Fiducial

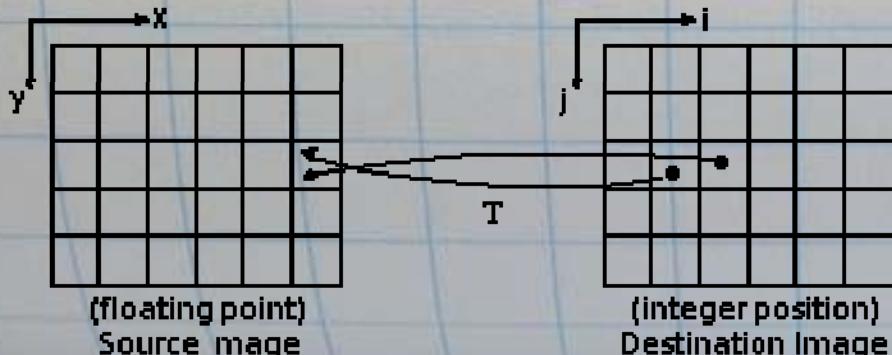

# Overview

# Pairwise Stereo-Reconstruction

- Pixel Matching

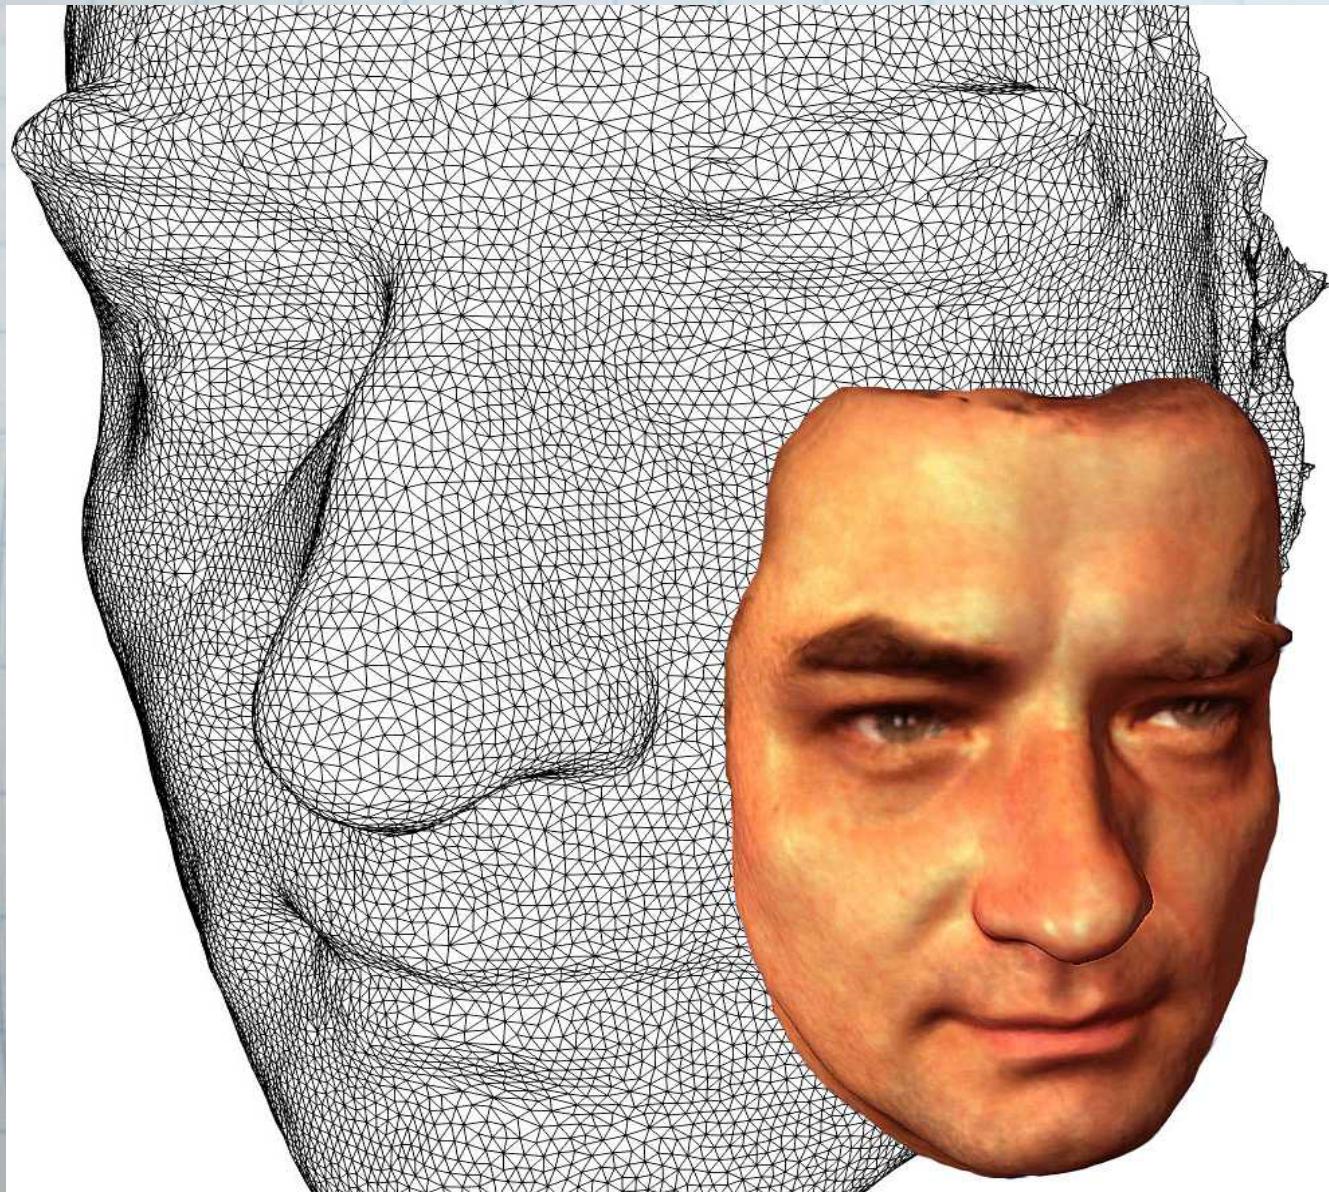

- Constraints

- Smoothness Constraint
- Uniqueness Constraint
- Ordering Constraint

# Overview

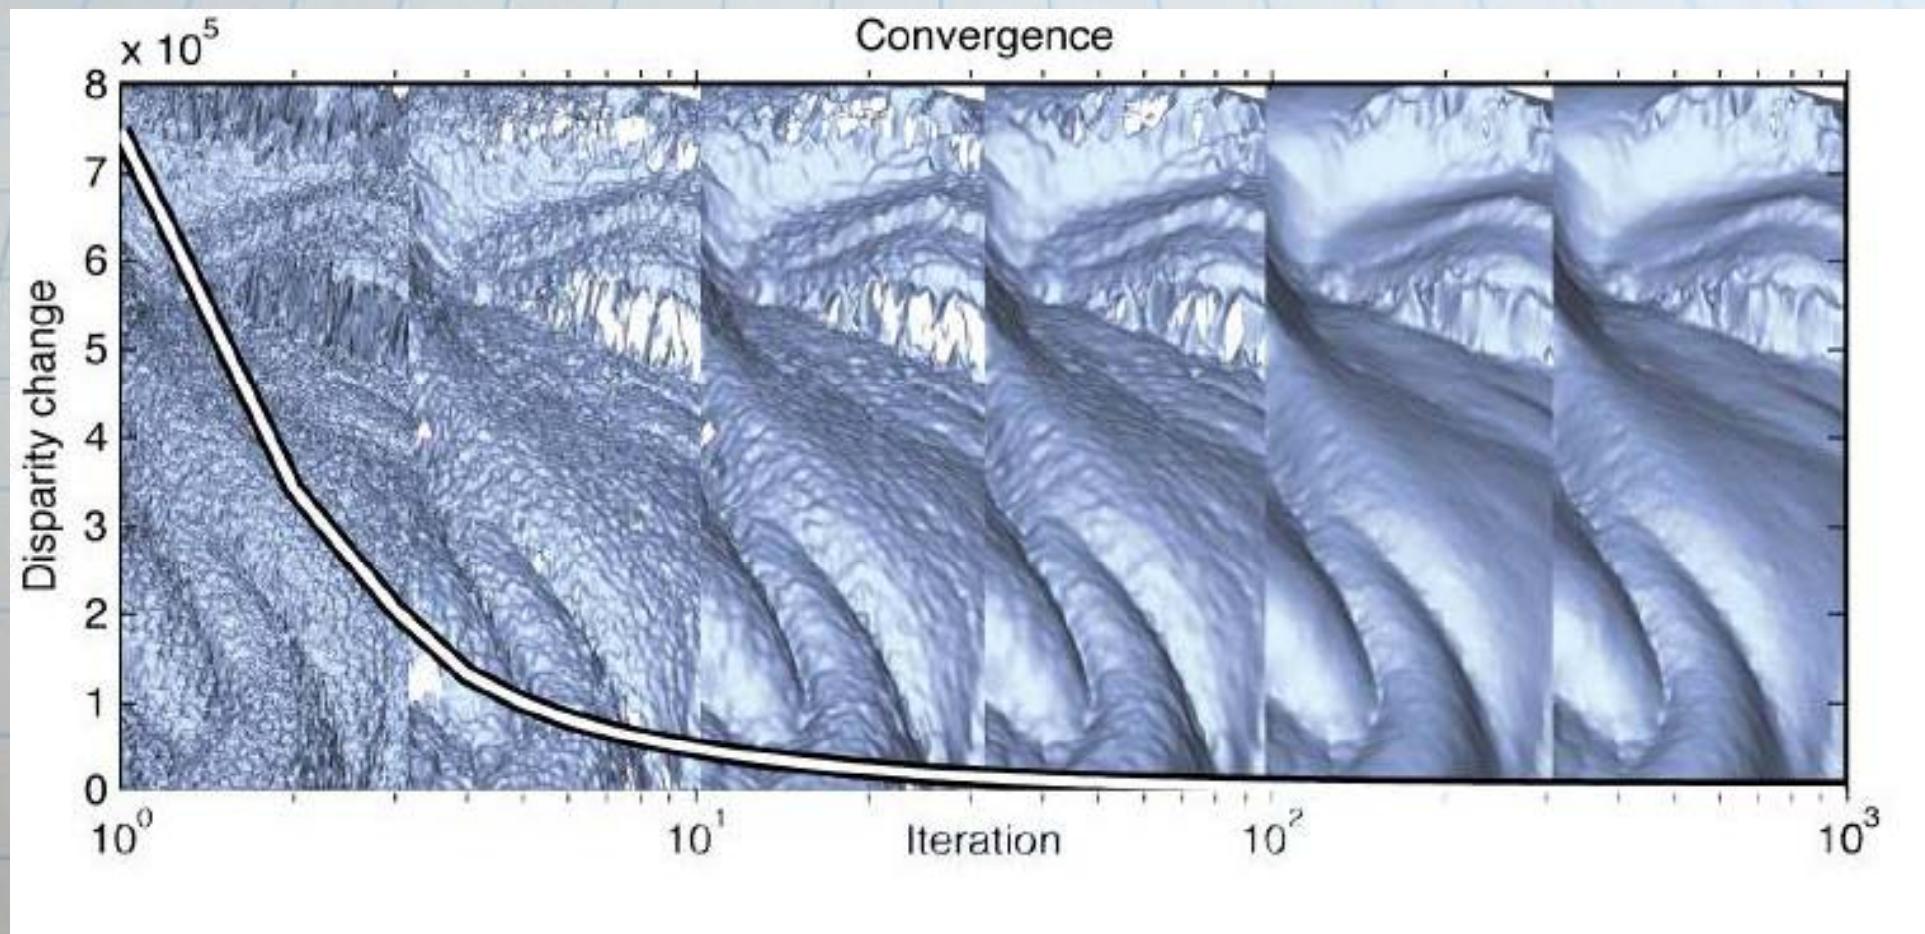

# Meshing

# Overview

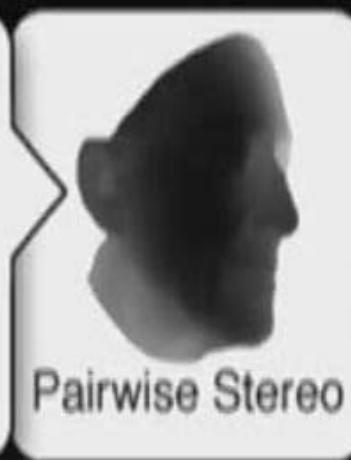

# Refinement

# Overview

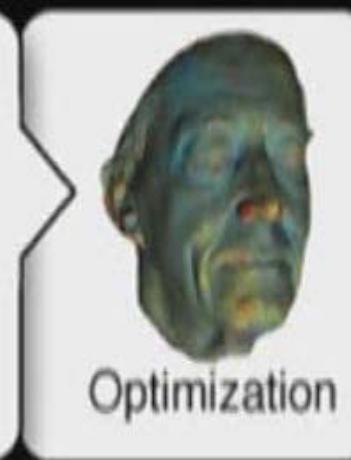

Calibration

Pairwise Stereo

Meshing

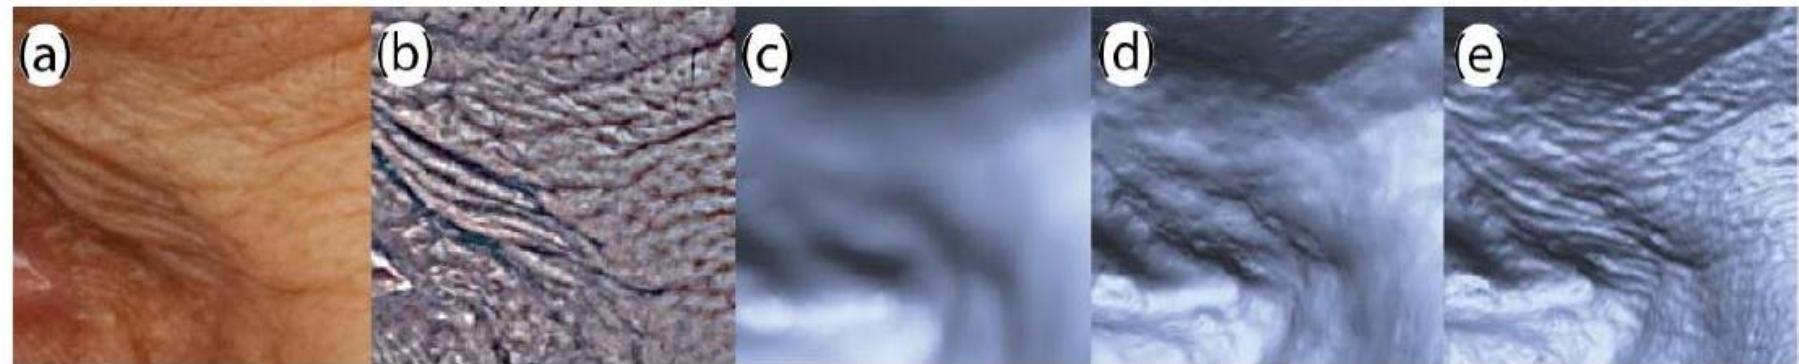

Optimization

Mesoscopic

# Mesoscopic Consistency

a) photo

b) filter

c) mesh

d) refinement e) mesoscopic

# Mesoscopic Augmentation

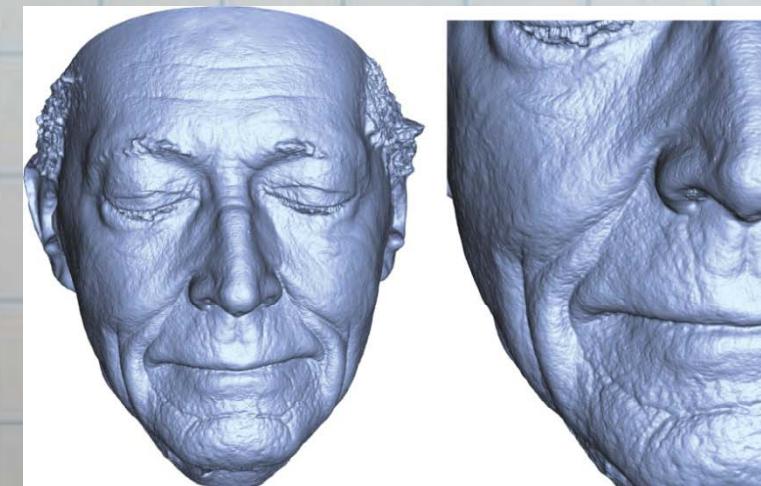

# Results

- Capture Process
- Quantitative Evaluation
- Qualitative Evaluation

# Capture Process

**flexibility**

Studio-Setup

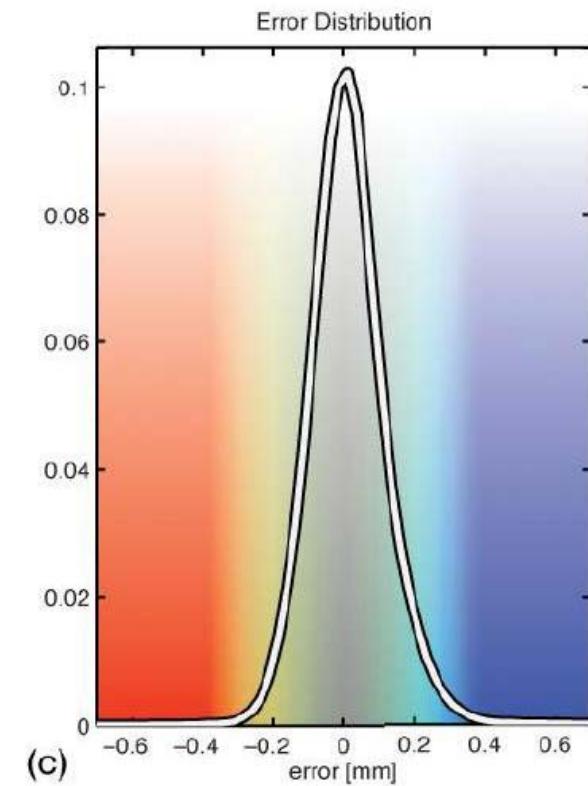

Stereo-Camera

# Quantitative Evaluation

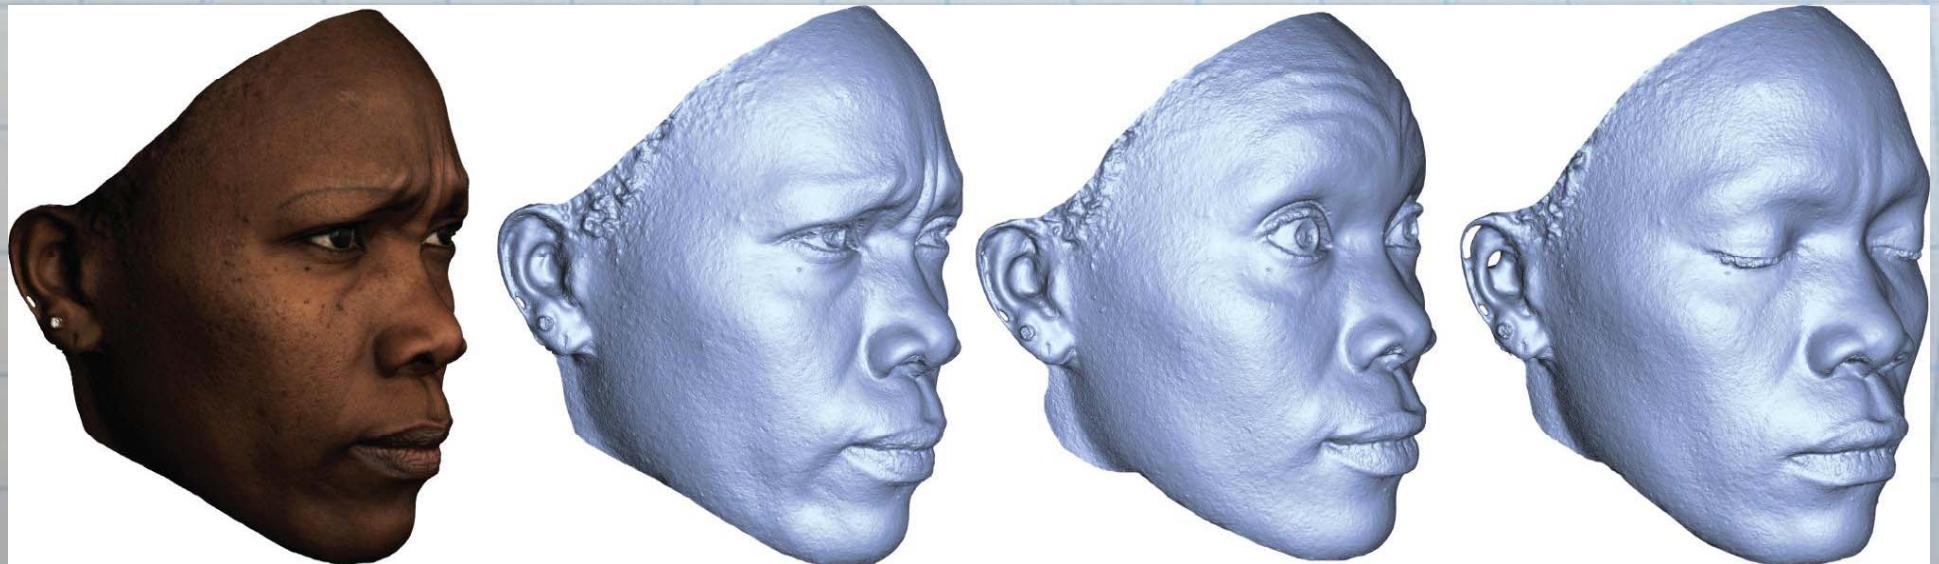

physical mask

# Qualitative Evaluation

## robustness

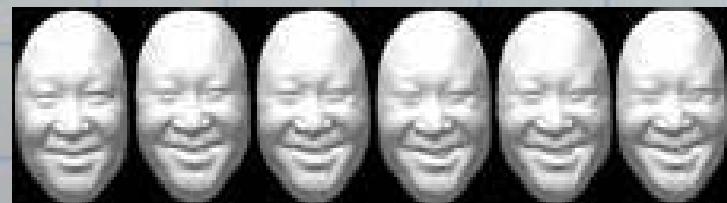

- faces of varying gender, ethnicity, age and facial expression

# Results

# Conclusion

- good results for both capture methods
- problem with direct lighting
- passive system can compete with active systems in reliability and quality
- future work: image sequences
