Call for Bachelor Thesis (B.A. or B.Sc.)

“Exploring Social Interactions in VR for Individuals with Autism“

Description:
Virtual reality (VR) has transformed our digital landscape. This study aims to illuminate how individuals with Autism Spectrum Disorder (ASD) interact socially within VR environments compared to real-world settings. Based on a literature review, the goal is to derive in-depth insights, highlighting both the advantages and challenges of using VR as a tool for enhancing social interactions for those with ASD. Upon completion of this thesis, student is anticipated to develop a proficiency in conducting comprehensive literature reviews and to gain foundational knowledge in VR technology.

Supervision is provided in English.

Requirements:
The student working on the topic should already have experience with virtual reality as a technology. Experience with ASD would be helpful, but is not obligatory.

Start:
Ideally within the range of WiSe 2023/24.
